4.a. Rationale

The indicator is relevant because it reflects the level of electricity coverage

4.b. Comment and limitations

The numerator may not be exhaustive because some households supplied with electricity are not registered with REGIDESO. The indicator cannot be calculated by gender.

4.c. Method of computation

The indicator is given by the sum of GWH produced locally and GWH imported

4.d. Validation

Data from administrative sources are most often validated by the Technical Committee for Statistical Information (CTIS).

5. Data availability and disaggregation

The indicator is available at national level

6. Comparability/deviation from international standards

The indicator can be compared to other indicators of the same type at regional and international level
