This indicator is relevant because it highlights the percentage of women who have been victims of gender-based violence.

## ***4.b. Comment and limitations***

Updating the indicator requires a household survey which is very resource intensive. The indicator cannot be calculated by gender.

### ***4.c. Method of computation***

Ratio of people who have been victims of gender-based violence to the total population, expressed as a percentage

### ***4.d. Validation***

The results of the survey are validated at two levels: technical validation and official validation before publication

## ***5. Data availability and disaggregation***

Available by gender and Place of residence (Women; Men; Urban; Rural)

## ***6. Comparability/deviation from international standards***

The indicator can be compared to other indicators of the same type at regional and international level
