## ***4.a. Rationale***

The indicator is relevant because it reflects the level of electricity coverage

#### ***4.b. Comment and limitations***

The numerator may not be exhaustive because some households supplied with electricity are not registered with REGIDESO. The indicator cannot be calculated by gender.

#### ***4.c. Method of computation***

This indicator is given by the sum of households subscribing to REGIDESO

#### ***4.d. Validation***

The survey results data are validated at two levels: technical validation and official validation before publication.

### ***5. Data availability and disaggregation***

The indicator is available at national level

### ***6. Comparability/deviation from international standards***

The indicator can be compared to other indicators of the same type at regional and international level

### ***7. References and Documentation***
