

0.a. Goal

Objective 9. Build a resilient infrastructure, promote sustainable industrialization that benefits everyone and encourage innovation

0.b. Target

9.3 Increase, especially in developing countries, the access of enterprises, especially small industrial enterprises, to financial services, including loans on affordable terms, and their integration into value chains and markets

0.c. Indicator

9.3.1 Proportion of small businesses in total industry value added

2.a. Definition and concepts

The proportion of "small firms" in total industry value added represents the share of manufacturing value added of small manufacturing firms in total manufacturing value added. A company is the smallest legal unit that constitutes an organizational unit producing goods or services. Industrial enterprises are classified as small versus large or medium-sized for their distinct nature of economic organization, production capacity, scale of investment, and other economic characteristics.

4.c. Method of computation

Share of small business value added in total industry value added

5. Data availability and disaggregation
